

SELF-DRILLING TIMBER-TO-METAL SCREW

CERTIFIED

The SPP self-drilling screw is CE marked according to EN 14592. It is the ideal choice for professionals who demand quality, safety and reliable performance in structural timber-to-metal applications.

TIMBER-TO-METAL TIP

Special self-perforating tip with bleeder geometry for excellent drilling capacity both in aluminium (thickness: up to 3/8") and steel (thickness: up to 1/4").

CUTTING FINS

The fins protect the screw thread during timber pull-through. They guarantee maximum threading efficiency in metal and perfect adhesion between the thickness of the wood and the metal.

WIDE RANGE

Being partially threaded, it's ideal for fastening sandwich panels, even thick ones, to steel. Very sharp under-head ribs for a perfect surface finish on the wooden element.

FIELDS OF USE

Direct fastening, without pre-drilling hole, of timber elements to metallic substructures:

- in S235 steel with a maximum thickness of 1/4"
- in aluminium with a maximum thickness of 3/8"

SIP PANELS

The SPP is ideal for fastening SIP panels and sandwich panels thanks to the complete range of lengths (up to 9 1/2").
