

TVM

CONNECTOR FOR DECKING

FOUR VERSIONS

Different sizes for applications on boards with different thickness and gaps of varying width. Black version for complete concealment.

DURABILITY

The stainless steel ensures high corrosion-resistance. The micro-ventilation between the boards helps the durability of the wooden elements.

ASYMMETRIC GROOVING

Ideal for boards with asymmetrical "female-female" groove cuts. Ribbing on the surface of the connector ensures excellent stability.

BOARDS

FASTENING ON

timber

WPC

aluminium

MATERIAL

A2 | AISI304 austenitic stainless steel (CRC II)

stainless steel with colored organic coating

FIELDS OF USE

Use in aggressive outdoor environments. Fastening timber or WPC boards on substructures in wood, WPC or aluminium.

CODES AND DIMENSIONS

GEOMETRY

TVM1

TVM2

TVM3

TVMN4

KKA

Can also be used for fastening on aluminium profiles using KKA AISI410 or KKA COLOR screws.

GROOVING GEOMETRY

ASYMMETRICAL GROOVING

Min. thickness	F	0.12 in
Min recommended height TVM1	H	0.28 in
Min recommended height TVM2	H	0.35 in
Min recommended height TVM3	H	0.39 in
Min. recommended height TVMN	H	0.51 in

INSTALLATION

Position the PROFID spacer at the joist centerline. First board: fix with suitable screws which are left visible.

Insert the TVM fastener into the groove cut so that the side fin adheres to the groove in the board.

Position the next board by inserting it into the TVM fastener.

Using the CRAB MINI or CRAB MAXI clamp, tighten the two boards until the gap between them is 0.28 inch (see product page 424).

Fix the fastener to the batten underneath by using the KKT screw.

Repeat the operations for the remaining boards. Last board: repeat step 01.

CALCULATION EXAMPLE

INCIDENCE ESTIMATE FORMULA PER ft²

$$1 \text{ ft}^2 / i / (L + f) = \text{pcs of TVM at ft}^2$$

i = battens spacing

L = board width

f = gap width

PRACTICAL EXAMPLE

NUMBER OF BOARDS AND BATTENS

PATIO SURFACE

$$S = A \cdot B = 16.69 \text{ ft} \cdot 13.12 \text{ ft} = 258.33 \text{ ft}^2$$

WOODEN PLANKING

BATTENS

$$\begin{aligned} \text{no. boards} &= [B / (L + f)] \\ &= [13.12 / (0.46 + 0.02)] = 27 \text{ boards} \\ \text{no. 13.12 ft boards} &= 27 \text{ boards} \\ \text{no. 6.56 ft boards} &= 27 \text{ boards} \\ \text{no. battens} &= [A / i] + 1 = (19.69 / 1.97) + 1 = 11 \text{ battens} \end{aligned}$$

SCREW SELECTION

Screw head thickness	$S_{\text{screw head}}$	0.11 in
Grooving thickness	F	0.16 in
Grooving dimension	H	0.39 in
PROFID thickness	S_{PROFID}	0.31 in
Pull-through length	L_{pen}	$4 \cdot d$ 0.80 in

MINIMUM SCREW LENGTH

$$\begin{aligned} &= S_{\text{screw head}} + H + S_{\text{PROFID}} + L_{\text{pen}} \\ &= 0.11 + 0.39 + 0.31 + 0.8 = 1.61 \text{ in} \end{aligned}$$

CHOICE OF SCREW

KKTX540A4

TVM NUMBER CALCULATION

QUANTITY FOR INCIDENCE FORMULA

$$I = S / i / (L + f) = \text{pcs of TVM}$$

$$I = 258.33 \text{ ft}^2 / 1.97 \text{ ft} / (0.46 \text{ ft} + 0.02 \text{ ft}) = 272 \text{ pcs TVM}$$

waste coefficient = 1,05

$$I = 272 \cdot 1,05 = 286 \text{ pcs TVM}$$

$$I = 286 \text{ pcs TVM}$$

TVM NUMBER = 286 pcs

QUANTITY FOR THE NUMBER OF INTERSECTIONS

$$I = \text{no. boards with TVM} \cdot \text{no. battens} = \text{pcs. of TVM}$$

$$\text{no. boards with TVM} = (\text{number of boards} - 1) = (27 - 1) = 26 \text{ boards}$$

$$\text{no. of battens} = (A / i) + 1 = (19.69 / 1.97) + 1 = 11 \text{ battens}$$

$$\text{no. intersections} = I = 26 \cdot 11 = 286 \text{ pcs TVM}$$

$$I = 286 \text{ pcs TVM}$$

SCREWS NUMBER = No. TVM = 286 pcs KKTX540A4
