

CONCEALED BRACKET WITHOUT HOLES

STEEL-ALUMINUM

EN AW-6060 aluminium alloy bracket obtained by extrusion and therefore weld-free.

SLENDER STRUCTURES

The small dimensions of the side allows to connect secondary beams with limited width (starting from 45 mm | 1 25/32 inch).

INCLINED JOINTS

Certified strengths calculated in all directions: vertical, horizontal and axial. They can be used in inclined joints.

CHARACTERISTICS

FOCUS	concealed joints
TIMBER SECTIONS	from 45 x 70 mm to 140 x 280 mm
	from 1 25/32 x 2 3/4 inch to 5 1/2 x 7 7/8 inch
STRENGTH	R _{v,k} up to 36 kN
	adjusted load carrying capacity up to 2871 lbs
FASTENERS	HBS PLATE EVO, SBD, STA, SKS

VIDEO

Scan the QR Code and watch the video on our YouTube channel

MATERIAL

Aluminium alloy three dimensional perforated plate.

FIELDS OF USE

Timber-to-timber and timber-to-concrete shear joints, both perpendicular and inclined

- solid timber and glulam
- CLT, LVL
- timber based panels

QUICK ASSEMBLING

The fastening, simple and fast, is realized through screws HBS PLATE EVO on the main beam and self-drilling or smooth dowels on the secondary beam.

INVISIBLE

The concealed connection provides a satisfying appearance to the joint and fulfils the fire safety requirements. When adequately protected by timber, it is suitable for outdoor use.

MATERIAL AND DURABILITY

ALUMINI: EN AW-6060 aluminium alloy.
To be used in dry service conditions.

FIELDS OF USE

- Timber-to-timber, timber-to-concrete and timber-to-steel joints
- Perpendicular and inclined joints

The minimum spacing and distances of Rotho Blaas fasteners are according to the European Technical Assessment ETA-09/0361 and to the Eurocode 5. The values from ETA-09/0361 are based on experimental tests carried out according to ETAG015 for several configurations. The values from Eurocode 5 are based on extensive research studies.

ASSEMBLY

Recommended minimum beam size: 45 mm | 1 25/32"

NOTES:

- Download the latest version of this document from www.rotehblaas.com.
- It is up to the designer to calculate the resistance of the ALUMINI with partial nailing in case of force parallel to the grain of the main structural member.

GENERAL PRINCIPLES:

- Contact Rotehblaas' technical office for more information about the product.
- Dimensioning and verification of the timber elements must be carried out separately.
- Strength values of the connection system are valid under the calculation hypotheses listed in the table.
- All reference lateral design values are calculated in accordance with the NDS. The analytical model is outlined in ETA-09/0361.
