

CONE-SHAPED CONCEALED HEAD SCREW

ORGANIC COLOURED COATING

Carbon steel version with coloured anti-rust coating (brown, grey, green, sand and black) for outdoor use in service class 3 on non acid timbers (T3).

COUNTER THREAD

The inverse (left-hand) under-head thread guarantees excellent grip. Small conical head to ensure it is hidden in the timber.

TRIANGULAR BODY

The three-lobed thread makes it possible to cut the wood grain during screwing. Exceptional timber pull-through.

MATERIAL

ORGANIC COATING carbon steel with coloured organic anti-rust coating

FIELDS OF USE

Outdoor use.
Wooden boards with density of $< 780 \text{ kg/m}^3$ (without pre-drill) and $< 880 \text{ kg/m}^3$ (with pre-drill).
WPC boards (with pre-drill).

GEOMETRY AND MECHANICAL CHARACTERISTICS

GEOMETRY

Nominal diameter	d_1	[mm]	5,1	6
Head diameter	d_k	[mm]	6,75	7,75
Thread diameter	d_2	[mm]	3,40	3,90
Shank diameter	d_s	[mm]	4,05	4,40
Pre-drilling hole diameter ⁽¹⁾	d_v	[mm]	3,0 - 4,0	4,0 - 5,0

⁽¹⁾ For high density materials, pre-drilled holes are recommended based on the wood specie.

CHARACTERISTIC MECHANICAL PARAMETERS

Nominal diameter	d_1	[mm]	5,1	6
Tensile strength	$f_{tens,k}$	[kN]	9,6	14,5
Yield moment	$M_{y,k}$	[Nm]	8,4	9,9
Withdrawal resistance parameter	$f_{ax,k}$	[N/mm ²]	14,7	14,7
Associated density	ρ_a	[kg/m ³]	400	400
Head-pull-through parameter	$f_{head,k}$	[N/mm ²]	68,8	20,1
Associated density	ρ_a	[kg/m ³]	730	350

MINIMUM DISTANCES FOR SHEAR LOADS

a _{4,t}	[mm]	7·d	35
a _{4,c}	[mm]	3·d	15

α = load-to-grain angle
d = screw diameter

NOTES

- The minimum distances are compliant with EN 1995:2014, according to ETA-11/0030, considering a calculation diameter of d = screw diameter.
- The minimum spacing for all steel-to-timber connections (a₁, a₂) can be multiplied by a coefficient of 0,7.
- The minimum spacing for all panel-to-timber connections (a₁, a₂) can be multiplied by a coefficient of 0,85.

GENERAL PRINCIPLES

- Characteristic values according to EN 1995:2014.
- Design values can be obtained from characteristic values as follows:

$$R_d = \frac{R_k \cdot k_{mod}}{\gamma_M}$$

The coefficients γ_M and k_{mod} should be taken according to the current regulations used for the calculation.

- Mechanical strength values and screw geometry comply with CE marking according to EN 14592.
- Dimensioning and verification of timber elements and steel plates must be carried out separately.
- The screws must be positioned in accordance with the minimum distances.
- The KKT screws with twin thread are mainly used for wood-wood joints.
- The KKTN540 fully threaded screw is mainly used for steel plates (e.g. FLAT patio system).

NOTES

- The axial thread withdrawal resistance was calculated considering a 90° angle between the grain and the connector and for a fixing length of b.
- The axial resistance to head pull-through was calculated using timber elements also considering the underhead thread.
- A characteristic head-pull-through parameter equal to 20 N/mm² with associated density $\rho_a = 350 \text{ kg/m}^3$ is considered in the calculation phase for the Ø5 diameter.
- The characteristic shear strengths are evaluated considering the case of thin plate ($S_{PLATE} \leq 0,5 d_1$) and intermediate plate ($0,5 d_1 < S_{PLATE} < d_1$).
- In the case of steel-to-timber connections, generally the steel tensile strength is binding with respect to head separation or pull-through.
- For the calculation process a timber characteristic density $\rho_k = 420 \text{ kg/m}^3$ has been considered.
