

HIGH-PERFORMANCE HYBRID CHEMICAL ANCHOR

- Urethane-methacrylate based resin
- CE option 1 for cracked and uncracked concrete
- C2 Seismic performance category (M12-M24)
- Certified fire resistance F120
- Comply with LEED® v4.1 BETA
- A+ Class: emission of volatile organic compounds (VOC) in living environments
- Ideal for extra-heavy anchors and post-installed reinforcement rods
- Excellent long-term creep behaviour
- Dry or wet concrete
- Concrete with submerged holes
- Overhead application allowed
- Certified installation also with hollow drill bit

USA, Canada and more design values available online.

NOTES

- ⁽¹⁾ Refer to the relevant ETA document for use of rebars.
- ⁽²⁾ Steel failure mode.
- ⁽³⁾ Installation is only allowed with CAT and HDE.
- ⁽⁴⁾ Concrete cone failure method.
- ⁽⁵⁾ Valid concrete material safety coefficient value using CAT in the installation. For different installation systems, use a coefficient of γ_M equal to 1,8.
- ⁽⁶⁾ Pull-out and concrete cone failure.
- ⁽⁷⁾ Tensile-strength increment factor (excluding steel and concrete cone failure) for both cracked and uncracked concrete.

GENERAL PRINCIPLES

- The characteristic values are according to EN 1992-4:2018 with a factor α_{SUS}=0.6 and in accordance with ETA-20/1285.
 - The design values are obtained from the characteristic values as follows: R_d = R_k/γ_M. Coefficients γ_M are listed in the table in accordance with the failure characteristics and product certificates.
 - For the calculation of anchors with reduced spacing, or too close to the edge, please refer to ETA. Similarly, in case of fastening on concrete-supports with a better-grade, limited thickness or a thick reinforcing layer please see ETA.
 - For the design of anchors subjected to seismic loading refer to ETA and to EN 1992-4:2018.
 - For specifications of the diameters covered by the various certifications (cracked concrete, uncracked concrete, seismic applications), please refer to ETA.
- Component A and Component B classification: Skin Sens. 1. May cause an allergic skin reaction.

STRUCTURAL CHARACTERISTIC VALUES

Valid for a single threaded rod (INA or MGS) when installed with IR in C20/25 grade concrete with a thin reinforcing layer, considering spacing, edge-distance, and base-concrete thickness as non-limiting parameters.
