

HIGH BOND NAIL

EXCELLENT PERFORMANCE

The new LBA nails have shear strength values among the highest on the market and make it possible to certify characteristic nail strengths that more closely approximate actual experimental strengths.

CERTIFIED ON CLT AND LVL

Tested and certified values for plates on CLT substrates. Its use is also certified on LVL.

LBA BINDED

The nail is also available in a bound version with the same ETA certification and therefore the same high performance.

STAINLESS STEEL VERSION

The nails are also available with the same certification from ETA in A4/AI-SI316 stainless steel for outdoor applications, with very high strength values.

DIAMETER [mm] 3 **4** 6 12

LENGTH [mm] 25 **40** 100 200

MATERIAL

electrogalvanized carbon steel

A4 | AISI316 austenitic stainless steel (CRC III)

LBA 25 PLA

LBA 34 PLA

LBA COIL

FIELDS OF USE

- timber based panels
- fibreboard and MDF panels
- solid timber
- glulam (Glued Laminated Timber)
- CLT, LVL

CAPACITY DESIGN

The strength values are much closer to the actual experimental strengths, so capacity design can be performed more reliably.

WKR

Values also tested, certified and calculated for fastening standard Rothoblaas plates. Using the nailer speeds up and facilitates installation.

Use with NINO angle brackets allows for some of the most versatile applications: even for beam-to-beam joints.

LBA achieves the highest performance together with the WKR angle brackets with the specific strength values on CLT. ➤

■ GEOMETRY AND MECHANICAL CHARACTERISTICS

Nominal diameter	d_1	[mm]	LBA		LBAI
			4	6	4
Head diameter	d_K	[mm]	8,00	12,00	8,00
External diameter	d_E	[mm]	4,40	6,60	4,40
Head thickness	t_1	[mm]	1,50	2,00	1,50
Hole diameter on steel plate	$d_{V,steel}$	[mm]	5,0÷5,5	7,0÷7,5	5,0÷5,5
Pre-drilling hole diameter ⁽¹⁾	d_V	[mm]	3,0	4,5	3,0
Characteristic yield moment	$M_{y,k}$	[Nm]	6,68	20,20	7,18
Characteristic withdrawal-resistance parameter ^{(2) (3)}	$f_{ax,k}$	[N/mm ²]	6,43	8,37	6,42
Characteristic tensile strength	$f_{tens,k}$	[kN]	6,5	17,0	6,5

⁽¹⁾ Pre-drilling valid for softwood.

⁽²⁾ Valid for softwood - maximum density 500 kg/m³. Associated density $\rho_a = 350 \text{ kg/m}^3$.

⁽³⁾ Valid for LBA460 | LBA680 | LBAI450. For other nail lengths refer to ETA-22/0002.

α = load-to-grain angle
 $d = d_1$ = nominal nail diameter

NOTES

- The minimum distances comply with the EN 1995:2014 standard in accordance with ETA-22/0002.
- In the case of timber-to-timber joints, the minimum spacing (a_1, a_2) can be multiplied by a coefficient of 1,5.

EFFECTIVE NUMBER FOR SHEAR-STRESSED NAILS

The load-bearing capacity of a connection made with several nails, all of the same type and size, may be lower than the sum of the load-bearing capacities of the individual connection system. For a row of n nails arranged parallel to the direction of the grain at a distance a_1 , the characteristic effective load-bearing capacity is equal to:

$$R_{ef,V,k} = n_{ef} \cdot R_{V,k}$$

The n_{ef} value is given in the table below as a function of n and a_1 .

n		$a_1^{(*)}$									
		4·d	5·d	6·d	7·d	8·d	9·d	10·d	11·d	12·d	≥ 14·d
2	2	1,41	1,48	1,55	1,62	1,68	1,74	1,80	1,85	1,90	2,00
	3	1,73	1,86	2,01	2,16	2,28	2,41	2,54	2,65	2,76	3,00
	4	2,00	2,19	2,41	2,64	2,83	3,03	3,25	3,42	3,61	4,00
	5	2,24	2,49	2,77	3,09	3,34	3,62	3,93	4,17	4,43	5,00

(*)For intermediate a_1 values a linear interpolation is possible.

4	50	40	2,67	2,67	2,67	2,67	2,67	2,66	2,63	1,11	

NOTES

- For the calculation process a timber characteristic density $\rho_k = 385 \text{ kg/m}^3$ has been considered. For different ρ_k values, the strength values in the table can be converted by the k_{dens} coefficient.

$$R'_{V,k} = k_{\text{dens},v} \cdot R_{V,k}$$

$$R'_{ax,k} = k_{\text{dens},ax} \cdot R_{ax,k}$$

ρ_k [kg/m ³]	350	380	385	405	425	430	440
C-GL	C24	C30	GL24h	GL26h	GL28h	GL30h	GL32h
k _{dens,v}	0,90	0,98	1,00	1,02	1,05	1,05	1,07
k _{dens,ax}	0,92	0,98	1,00	1,04	1,08	1,09	1,11

Strength values thus determined may differ, for higher safety standards, from those resulting from an exact calculation.

NOTES | CLT

- The characteristic values are according to the national specifications ÖNORM EN 1995 - Annex K.
- For the calculation process a mass density $\rho_k = 350 \text{ kg/m}^3$ has been considered for the boards constituting the CLT panel.
- The characteristic strengths in the table are valid for nails inserted into the side face of the CLT panel (wide face) penetrating more than one layer.

GENERAL PRINCIPLES on page 257.

MINIMUM DISTANCES FOR NAILS SUBJECT TO SHEAR | CLT

nails inserted **WITHOUT** pre-drilled hole

d_1	[mm]	4	6
a_1	[mm]	$6 \cdot d$	24
a_2	[mm]	$3 \cdot d$	12
$a_{3,t}$	[mm]	$10 \cdot d$	40
$a_{3,c}$	[mm]	$6 \cdot d$	24
$a_{4,t}$	[mm]	$3 \cdot d$	12
$a_{4,c}$	[mm]	$3 \cdot d$	12

d_1	[mm]	4	6
a_1	[mm]	$3 \cdot d$	12
a_2	[mm]	$3 \cdot d$	12
$a_{3,t}$	[mm]	$7 \cdot d$	28
$a_{3,c}$	[mm]	$6 \cdot d$	24
$a_{4,t}$	[mm]	$7 \cdot d$	28
$a_{4,c}$	[mm]	$3 \cdot d$	12

α = angle between force and direction of the grain of the CLT panel outer layer.
 $d = d_1$ = nominal nail diameter

NOTES

- The minimum distances are compliant with national specification ÖNORM EN 1995-1-1 - Annex K and are to be considered valid unless otherwise specified in the technical documents for the CLT panels.
- The minimum distances are valid for minimum CLT thickness $t_{CLT,min} = 10 \cdot d_1$ and for minimum individual layer thickness $t_{i,min} = 9$ mm.

STRUCTURAL VALUES

GENERAL PRINCIPLES

- Characteristic values comply with the EN 1995:2014 standard in accordance with ETA-22/0002.
- Design values can be obtained from characteristic values as follows:

$$R_d = \frac{R_k \cdot k_{mod}}{\gamma_M}$$

The coefficients γ_M and k_{mod} should be taken according to the current regulations used for the calculation.

- For the mechanical strength values and the geometry of the nails, reference was made to ETA-22/0002.
- Sizing and verification of the timber elements and metal plates must be done separately.
- The characteristic shear strength are calculated for nails inserted without pre-drilled hole.
- The nails must be positioned in accordance with the minimum distances.

- The values in the table are independent of the load-to-grain angle.
- The axial withdrawal resistance values were calculated considering a 90° angle between the grains and the connector and a penetration length of b .
- The characteristic shear-strength value for LBA/LBAI Ø4 nails has been evaluated assuming a plate thickness = S_{PLATE} , always considering the case of thick plates according to ETA-22/0002 ($S_{PLATE} \geq 1,5$ mm).
- The characteristic shear-strength value for LBA Ø6 nails has been evaluated assuming a plate thickness = S_{PLATE} , always considering the case of thick plate according to ETA-22/0002 ($S_{PLATE} \geq 2,0$ mm).
- In the case of combined shear and tensile stress, the following verification must be satisfied:

$$\left(\frac{F_{v,d}}{R_{v,d}} \right)^2 + \left(\frac{F_{a,d}}{R_{a,d}} \right)^2 \leq 1$$
